

Construction Safety is All About Risk Management

Business leaders recognize safety risks and learn how to control them. They take a proactive approach to environmental health and safety (EHS) and implement a safety management system (SMS) that helps them reduce the risk of workplace incidents and avoid unnecessary costs, which can include downtime and higher workers' compensation rates. In the process, these leaders create a safety culture and define roles and responsibilities for managers and employees.

EHS Risk Management, LLC can help manage the risks and avoid these unnecessary costs. Our approach is to provide an outsourced risk management system, which will help you define the policies, plans, and procedures that your organization requires. By combining our domain expertise with today's technology, we can provide an outsourced solution that costs less than hiring an in-house safety manager.

“Implementing the safety management system with today's technology can save you time and money.”
– Jim Testo, President, EHS Risk Management, LLC

When you work with EHS Risk Management, your organization will learn how to continuously recognize and control hazards. You'll also develop an SMS with safety plans that are specific to your company and projects. We provide the technology and the expertise, but your staff implements the operational plan and establishes your company's safety culture.

The systems and processes that you define with our SMS are readily available on smartphones and tablets – devices that your workers already have. With our cloud-based solution, everyone always has the latest information at their fingertips. With today's technology and our domain expertise, you can outsource the management of your safety program and still meet your legal responsibilities to provide a safe and healthful workplace.

EHS Risk Management can build and manage an effective safety system for you. The [EHS Risk Manager](#) is a business value proposition that reduces costs and supports performance. Our experts can build your entire program, but you can use your own personnel to implement it. The [EHS Portal](#) provides a real-time process for managing and implementing your company's policies, documents and procedures.
